**PRESS RELEASE**

**Gilman Brothers Adds MountCor® Black to MountCor HA Foamboard Family**

*The Only Black Low Temperature Heat-Activated Foamboard Safe for ALL Digitals*

SOURCE: THE GILMAN BROTHERS COMPANY, GILMAN, CT, AUGUST 28, 2014

The Gilman Brothers Company, Gilman CT has launched MountCor® Black, joining original MountCor® white heat-activated (HA) foamboard as the revolutionary low temperature--130°F (54°C) mechanical and hot vacuum presses and 180°F (82°C) rollers—substrate with roller production speeds up to 10 ft. per minute and no adhesive transfer. MountCor has a permanent, neutral pH adhesive, and bonding at a lower temperature than other 150°F HA boards is safe for all heat sensitive items including laser copies, inkjet (waterborne, UV, solvent and latex), photographic papers and synthetic medias.

MountCor Black allows for mounting two-sided images with no fear of text bleeding through. It's translucent, gridded, release liner makes image alignment fast and clean plus the foolproof air release technology ensures bubble-free mounting. Available 3/16" thick up to 48" x 96".

The Gilman Brothers Company is well known for supplying the sign and picture frame industries with innovative substrates and solution solving products.
